Data analysis

We have already loaded a data file above (invisible here), so we can now easily run R code internally. For example, the mean reaction time in our data is 904.66ms. For `lig` specifically, it's 852.16ms.

We can print a proper table by adding `df-print: kable` to our preamble. This will turn any data frame/tibble outputs into a *real* table.

Table 1: A nice-looking table from our data

Affix	Mean RT (ms)
lig	852.16
ere	932.76
ede	870.90
bar	913.13
ende	961.04

Figure

As usual, we can also create a nice figure directly within our `Qmd` file.

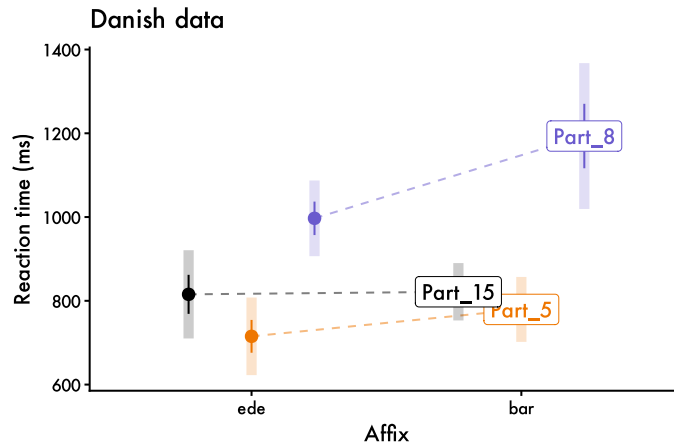

Figure 1: A figure in our document

Linguistics

Phonetic transcription can be done using the [Fonology](#) package (Garcia, 2026a). The package supports English, French, Italian, Portuguese and Spanish. For example, the word *comfortably* is [kʌm.fɜː.tə.bli]. Check gdgarcia.ca/fonology for more info on the package.

With Typst, we can load [phonokit](#) (Garcia, 2026b) and [synkit](#) (Garcia, 2026c), which in turn allow us to produce virtually any linguistic representation, like the prosodic word in Figure 2 and the tree in Figure 3.

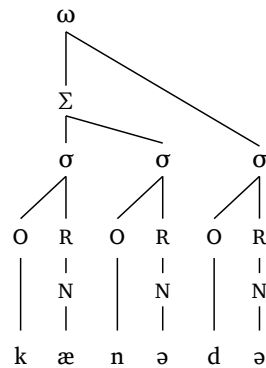

Figure 2: Prosodic structure in Quarto

Check the `Qmd` file for the code, but it's pretty minimal. For example, Figure 2 is generated with `#word("('k \æ.nə).də")`, which uses the familiar `tipa` reference for phonetic symbols (but you can technically add symbols directly into the document, since Unicode is fully supported in Typst).

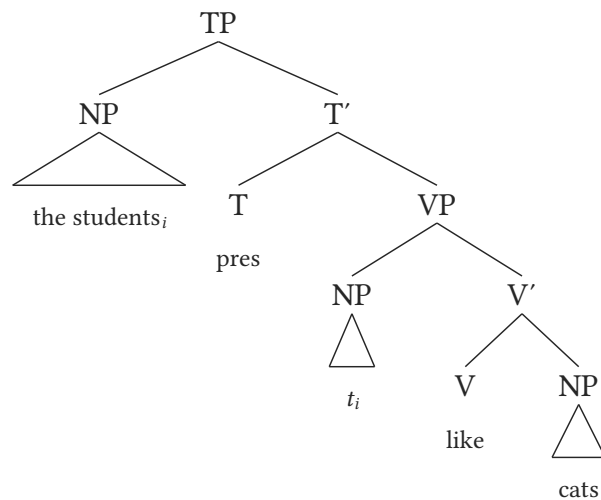

Figure 3: A syntax tree

Likewise, in-line arrows and numbered examples are available.

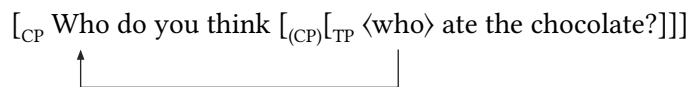

Figure 4: In-line movement with the function `#move()` in `synkit`

Here's another example, this time printing vowels and consonants in English.

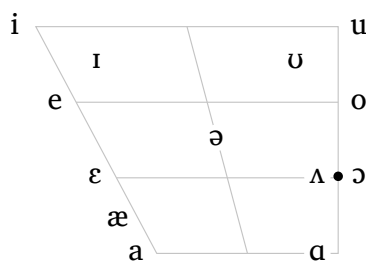

Figure 5: Vowel inventory in English

The `#consonants()` function is also handy: it comes with some preset languages, but you can also set up your own inventory.

	Bilabial	Labiodental	Dental	Alveolar	Postalveolar	Palatal	Velar	Glottal
Plosive	p b			t d			k g	
Nasal	m			n			ŋ	
Fricative		f v	θ ð	s z	ʃ ʒ			h
Affricate					tʃ dʒ			
Approximant	w			ɹ		j	w	
Lateral approximant				l				

Figure 6: Consonant inventory in English
