

The fundamentals of data visualization in R

Day 3

University of Alberta, Edmonton, May 2026

Guilherme D. Garcia | gdgarcia.ca

1 Quarto

References

1. Use Office or $\LaTeX$ to write up a paper, a presentation, etc.
2. Use SPSS, SAS, Python, Julia, R to run our analysis
3. Use EndNote, Mendeley, etc. or $\BibTeX$ for references

This is probably the workflow of most people in linguistics. There are **two** modern alternatives here:

- A. Use Typst instead of $\LaTeX$: it's faster, lighter, more intuitive, and more powerful (replaces 1)
- B. Use Quarto, which combines 1–3 above in a **single file** based on Markdown: `Qmd`

Quarto: Today we combine everything we've seen into a single Quarto file. Plus, we'll add some linguistics to it using two specific packages that help us visualize representations.
